ORIGINAL OF EXCELLENT QUALITY

# What is Thymuskin®?

For more than 30 years, the Thymuskin® 2-Step System has been successfully used to fight against thinning hair problems and was used to not only nourish, reinforce, and strengthen the hair, but also provide essential nutrients for general hair care, all leading to noticeably thicker hair. Thymuskin® is suitable for both men and women and has no reported side effects. It contains the biologically active ingredient GKL-02 and additional quality ingredients for scalp and hair care.

Thymuskin® contains 3 lines - Classic, Med, and Forte. Each line contains a Shampoo and a Serum gel, all suited to match individual hair and scalp conditions.

## How Does Thymuskin® Work?

What makes Thymuskin® unique is the biologically active agent GKL-02, as inhibits various enzymes that play a key role in hair treatment. Harmful DHT are potentially blocked, which can reduce the dying of hair follicle cells. Furthermore, Thymuskin® activates and proliferates the keratinocytes in the hair matrix; the basic substance of each hair. It promotes the formation of new hair cells and strengthens the existing hair follicles. Thymuskin® also includes active ingredients such as caffeine, vitamin E and Urtica dioica which provides additional caring and nurturing functions. Also included are cosmetic ingredients such as Panthenol or plant and wheat proteins, which offers hair caring properties. Due to its effective active ingredient, no side effects, and its studied results, Thymuskin® is continuously recommended by dermatologists, pharmacists, and salon owners.

1. Prolonging the natural growth cycle by protection from DHT and enzymes
2. Rejuvenation of root hair follicles by activation of keratinocytes
3. Advanced stimulation by various thymic peptides

## Thymuskin® is Clinically Tested

Thymuskin® is actively engaged in scientific research with positive results found by dermatological clinics and university hospitals. The good tolerability and cosmetic acceptance have been repeatedly approved within controlled scientific observational studies and through investigations carried out by German and international skin clinics and university hospitals. During a recent observational study by Dr. Barbareschi, the efficacy and safety of Thymuskin® was tested by 364 participating patients over a period of 6 months. In addition to a significant reduction of thinning hair, a positive tolerability was reported in 100% of cases and no side effects were reported. Furthermore, a positive cosmetic acceptance / tolerance could be approved in 98% of all cases.\*
